*The publication is not difficult in go through better to comprehend. I could comprehended everything using this created e publication. Its been designed in an exceptionally easy way in fact it is merely soon after i finished reading through this ebook by which basically transformed me, modify the way i really believe.*

Jordan Canonical Form (JCF) is one of the most important, and useful, concepts in linear algebra. The JCF of a linear transformation, or of a matrix, encodes all of the structural information about that linear transformation, or matrix. This book is a careful development of JCF. After beginning with background material, we introduce Jordan Canonical Form and related notions: eigenvalues, (generalized) eigenvectors, and the characteristic and minimum polynomials. We decide the question of diagonalizability, and prove the Cayley-Hamilton theorem. Then we present a careful and complete proof of the fundamental theorem: Let  $V$  be a finite-dimensional vector space over the field of complex numbers  $\mathbb{C}$ , and let  $T : V \rightarrow V$  be a linear transformation. Then  $T$  has a Jordan Canonical Form. This theorem has an equivalent statement in terms of matrices: Let  $A$  be a square matrix with complex entries. Then  $A$  is similar to a matrix  $J$  in Jordan Canonical Form, i. e. , there is an invertible matrix  $P$  and a matrix  $J$  in Jordan Canonical Form with  $A = PJP^{-1}$ . We further present an algorithm to find  $P$  and  $J$ , assuming that one can factor the characteristic polynomial of  $A$ . In developing this algorithm we introduce the eigenstructure picture (ESP) of a matrix, a pictorial representation that makes JCF clear. The ESP of  $A$  determines  $J$ , and a refinement, the labeled eigenstructure picture (LESP) of  $A$ , determines  $P$  as well. We illustrate this algorithm with copious examples, and provide numerous exercises for the reader.
